摘要（原文节选）

The palladium-catalyzed Sonogashira coupling of α, β -unsaturated acid derivatives offers a diversity-oriented synthetic strategy for cross-conjugated enynones. However, the susceptibility of the unsaturated C-C bonds adjacent to the carbonyl group toward Pd catalysts makes the direct conversion of α, β -unsaturated derivatives as acyl electrophiles to cross-conjugated ketones rare. This work presents a highly selective C-O activation approach to prepare cross-conjugated enynones using α, β -unsaturated triazine ester …

脚注（逐字）：a All reactions were performed on a 0.25 mmol scale in 2 mL of solvent, and yields were determined by calibrated GC analysis with biphenyl as an internal standard. b catalyst (3% mol) was used. c catalyst (1% mol) was used, 24 h.

正文对应句（逐字）：Since there is limited access to cross-conjugated enynones from natural resources, considerable effort has been put into preparing conjugated acetylenic carbonyl compounds through various synthetic methods from commercially available starting materials. These methods include oxidatively dimerizing p
