摘要（原文节选）

This article presents a new three-step process for lenacapavir sodium, a first-in-class HIV capsid inhibitor developed by Gilead Sciences. Lenacapavir has received FDA approval for both the treatment of multidrug-resistant HIV (Sunlenca®, 2022) and PrEP (Yeztugo®, 2025). Previous medicinal chemistry synthetic routes relied on separate Pd-catalyzed couplings and involved atropisomeric intermediates, resulting in low efficiency. Gilead ’ s 2024 four-step process improved scalability but retained discrete Pd-catalyzed s …

Efficiency Improvement of Pd Removal in 7-K

#	SiliaMetS SH (wt %)	Temp (° C)	Time (h)	Pd (ppm)	Recovery yield (%)
1	-		-	500	-
2	75	50	3	129	95
3	25	50	3	188	83
4	5	80	20	<10 (LOQ)	92
5	10	80	20	<10 (LOQ)	93
6	5	80	3	<10 (LOQ)	95
7	10	80	3	<10 (LOQ)	95

脚注（逐字）：a 7-K (500 mg) was stirred with the respective scavenger in 10 volumes of MIBK. The resulting slurry was cooled down to 20 ° C and filtered with 50 wt % of Celite using a disposable funnel (10 μ m), and the solid was washed with MIBK (3 × 10 volumes). The combined organic filtrate was concentrated und

正文对应句（逐字）：Our initial efforts focused on developing Pd-free couplings and amine-protection-free approaches, − proved instrumental to developing the topical process. Attempts to install the alkyne moiety via the nucleophilic aromatic substitution (SNAr) of Frag D-Na (generated from Frag D and NaH) with Frag A
