摘要（原文节选）

Herein, we describe a novel azo-Povarov click reaction between N-carbonyl aryldiazenes and cis,trans-cycloocta-1,5-diene. This uncatalyzed [4 + 2] cycloaddition reaction enables the synthesis of a broad series of cinnoline derivatives at room temperature, in short reaction times and excellent yields (up to 98%). The functionality of the reaction has been also evidenced through the report of a high-yielding gram-scale synthesis as well as diverse transformations of the final cinnoline substrates. Furthermore, an act ⋯
