摘要（原文节选）

The hamigeran family of natural products has been the target of numerous synthetic efforts due to its biological activity and interesting structural properties. Herein we disclose our efforts toward the synthesis of hamigerans C and D, unique among the initially isolated members due to their 6-7-5 carbocyclic core. Our approach directly targets this tricyclic motif by sequential Negishi and Heck coupling reactions, yielding an advanced intermediate with all necessary carbons and sufficient functionality poised for ⋯

数据表 · Table 1（5 行，含数值行 4 行）

Temperature and solvent optimization studies for yield and selectivity in olefination reaction.

Entry	Solvent	Temperature	Z:E Ratio	Yield
1	THF	0→50 ° C	5:1	33 – 67%
2	THF	40 ° C	5:1	66 – 87%
3	THF	30 ° C	5:1	63%
4	Benzene	50 ° C	1.3:1	85%

数据表 · Table 2（9 行，含数值行 8 行）

Phosphonium ylide and base optimization studies for selectivity in olefination reaction.

Entry	R	Base	X	Z:E Ratio
1	Ph	NaHMDS	I	5:1
2	Ph	LiHMDS	I	2.5:1
3	Ph	LiHMDS (5:1 THF:HMPA)	I	1.5:1
4	Ph	KHMDS	I	3.3:1
5	Ph	NaOt-Bu	I	2.3:1
6	Ph	NaHMDS	Br	1.4:1
7	n-Bu	NaHMDS	I	2.0:1
8	o-Tol	NaHMDS	I	0.9:1
